**November 2, 2010**

**Patient:** Lucja Wiktor  
**DOB:** September 21, 2007  
**Parents:** Ewa & Jacek Wiktor  
**Address:** Str. Zrodlowa 19/33,  
25-535 Kielce, Poland  
**Cell:** +48 728 815 012  
**Email:** ewiktor1@wp.pl

To Whom It May Concern:

This letter is to confirm that Lucja Wiktor was evaluated by me in Poland on August 9, 2009. Through my examination, I was able to determine that Lucja sustained a severe traumatic injury to the right brachial plexus during birth (this is not a congenital problem). Below are the details to two surgical procedures that Lucja will need as soon as possible to improve the functionality and health of the affected limb. [The costs quoted are for the Dubai clinic only.]

**Modified Quad Procedure\*** (muscles releases and transfers) for contractures in the axilla and chest,

Clinic Appointment 400 AED Dirham  
MQ Surgical Cost: USD\$ 19,850 (AED Dirham 72,900)  
Hospital Costs: USD\$ 3,976 (AED Dirham 14,600)

\* with no complications

**Triangle Tilt Procedure\*** (a series of bony rotations as well as anterior capsule release) for SHEAR (Scapular Hypoplasia, Elevation and Rotation) and MRC (medial rotation contracture). This second surgery can be done as early as within three months of the first one.

Clinic Appointment 400 AED Dirham  
Surgical Cost: USD\$ 19,850 (AED Dirham 72,900)  
Hospital Costs: USD\$ 3,976 (AED Dirham 14,600)  
Post Surgery Brace: USD\$ 1,225 (AED Dirham 4,500)

\* with no complications

The family is responsible for their own travel and housing expenses. Each surgery requires a one night stay in the hospital. The family can leave Dubai two days after the release from the hospital.

If you need any additional information, please feel free to contact me directly.
